EDUCATION

University of Waterloo

Bachelor of Computer Science

Waterloo, ON

Sep. 2024 – May 2029

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Organization

EXPERIENCE

AI Engineering Intern

May 2026 – Present

Correctional Service Canada, Government of Canada

Ottawa, ON

- Re-architected CorrChat, the agency's organization-wide chatbot, from stateless OpenAI chat completions to an agent-based system on Azure AI Foundry using Azure AI Agents, consolidating conversation handling and document retrieval into a managed agent runtime
- Simplified retrieval, strengthened authentication, and improved operational reliability and maintainability across the deployment
- Added real-time speech-to-text to CorrChat using Azure Speech with automatic English/French language detection, custom phrase lists, and live partial transcription via the JavaScript SDK
- Prototype internal AI tools and automations under strict privacy, ethics, and governance requirements for public-sector use

Junior Software Developer

Sep. 2025 – Dec. 2025

TUQ Inc.

Waterloo, ON

- Built and shipped to production an AI-powered form assistant with the OpenAI API, Rails, and PostgreSQL that extracts user information through multi-turn conversation and auto-populates forms
- Cut form completion time by ~65% and submission failures by ~40% through improved extraction, validation, and user flow
- Developed a RAG-based AI agent (OpenAI embeddings stored in pgvector) that interprets natural-language commands to book appointments, update records, and support pharmacy workflows
- Built an RSpec test suite and CI pipeline with VCR API mocking, reaching 90% line coverage on extraction and form-filling workflows

PROJECTS

Controlla | *Python, FastAPI, WebSockets, Anthropic Claude*

Jan. 2026 – Present

- Building a voice-controlled laptop automation system that turns speech into planned macOS actions using a Claude-based planner over FastAPI and WebSockets
- Implemented a screenshot-based verification loop that confirms actions, retries failures, and replans when results do not match expectations

Overhand | *Python, React, Vite, OpenCV, Pillow, OpenAI Vision API*

2026 – Present

- Built an AI note-to-PDF tool that converts handwritten notes into structured LaTeX using image preprocessing and the OpenAI Vision API
- Added AI chat editing, live preview, and an export pipeline so users can refine, compile, preview, and download polished PDFs

Fraud Detector Extension | *React, Node.js/Express, Chrome Extension APIs, Gemini*

Jun. 2025

- Built a phishing-detection Chrome extension backend that scrapes page content, filters high-signal elements, and classifies scam patterns with an LLM
- Achieved ~90% detection on seeded scam pages and surfaced backend scores as client-side live alerts

TECHNICAL SKILLS

AI/ML: OpenAI API, Anthropic Claude, Gemini, Azure AI Foundry, Azure AI Agents, Azure Speech, RAG pipelines, LLM agents, prompt engineering

Languages: Python, Ruby, JavaScript/TypeScript, Java, SQL, C/C++

Frameworks/Libraries: FastAPI, Ruby on Rails, React, Flask, Node.js/Express, OpenCV, Pillow

Testing/CI: RSpec, VCR, FactoryBot, Shoulda, GitHub Actions

Databases & Tools: PostgreSQL, pgvector, Docker, Azure, Git, GitHub, VS Code, RubyMine, Vite, French (fluent)
